

$$\begin{aligned}
 \sin(\alpha - \beta) &= \cos[90^\circ - (\alpha - \beta)] \\
 &= \cos[(90^\circ - \alpha) + \beta] \\
 &= \cos(90^\circ - \alpha) \cos \beta - \sin(90^\circ - \alpha) \sin \beta \\
 &= \sin \alpha \cos \beta - \cos \alpha \sin \beta. \\
 \sin(\alpha + \beta) &= \sin[\alpha - (-\beta)] \\
 &= \sin \alpha \cos(-\beta) - \cos \alpha \sin(-\beta) \\
 &= \sin \alpha \cos \beta + \cos \alpha \sin \beta.
 \end{aligned}$$

老師的話
 $AD = BE + CE$,
 $DF = AB - CF$.

現在我們將正弦與餘弦的差角、和角公式整理如下。

和角與差角公式

$$\begin{aligned}
 \sin(\alpha + \beta) &= \sin \alpha \cos \beta + \cos \alpha \sin \beta, \\
 \sin(\alpha - \beta) &= \sin \alpha \cos \beta - \cos \alpha \sin \beta, \\
 \cos(\alpha + \beta) &= \cos \alpha \cos \beta - \sin \alpha \sin \beta, \\
 \cos(\alpha - \beta) &= \cos \alpha \cos \beta + \sin \alpha \sin \beta.
 \end{aligned}$$

例題 1

- 試求 $\cos 75^\circ$ 之值。
- 試求 $\cos 115^\circ \cos 145^\circ + \sin 115^\circ \sin 145^\circ$ 之值。

解

$$1. \cos 75^\circ = \cos(45^\circ + 30^\circ) = \cos 45^\circ \cos 30^\circ - \sin 45^\circ \sin 30^\circ$$

$$= \frac{\sqrt{2}}{2} \times \frac{\sqrt{3}}{2} - \frac{\sqrt{2}}{2} \times \frac{1}{2} = \frac{\sqrt{6} - \sqrt{2}}{4}.$$

$$2. \cos 115^\circ \cos 145^\circ + \sin 115^\circ \sin 145^\circ$$

$$= \cos(115^\circ - 145^\circ) = \cos(-30^\circ)$$

$$= \cos 30^\circ = \frac{\sqrt{3}}{2}.$$

隨堂練習

- 求 $\sin 75^\circ$ 之值。
- 求 $\sin 97^\circ \cos 37^\circ - \cos 97^\circ \sin 37^\circ$ 之值。

例題 2

設 $0 < \alpha < \frac{\pi}{2}$, $\frac{\pi}{2} < \beta < \pi$, 且 $\cos \alpha = \frac{5}{13}$, $\sin \beta = \frac{4}{5}$, 求 $\sin(\alpha + \beta)$ 與 $\cos(\alpha + \beta)$ 之值。

解

如右圖, $0 < \alpha < \frac{\pi}{2}$, $\frac{\pi}{2} < \beta < \pi$,

$$\text{由 } \cos \alpha = \frac{5}{13}, \text{ 所以 } \sin \alpha = \frac{12}{13}.$$

$$\text{由 } \sin \beta = \frac{4}{5}, \text{ 所以 } \cos \beta = -\frac{3}{5}.$$

利用和角公式, 得

$$\sin(\alpha + \beta) = \sin \alpha \cos \beta + \cos \alpha \sin \beta$$

$$= \frac{12}{13} \times \left(-\frac{3}{5}\right) + \frac{5}{13} \times \frac{4}{5} = -\frac{16}{65}.$$

$$\cos(\alpha + \beta) = \cos \alpha \cos \beta - \sin \alpha \sin \beta$$

$$= \frac{5}{13} \times \left(-\frac{3}{5}\right) - \frac{12}{13} \times \frac{4}{5} = -\frac{63}{65}.$$

隨堂練習

設 $\frac{\pi}{2} < \alpha < \pi$, $\frac{3\pi}{2} < \beta < 2\pi$, 且 $\cos \alpha = -\frac{3}{5}$, $\sin \beta = -\frac{8}{17}$, 求

$\sin(\alpha - \beta)$ 與 $\cos(\alpha - \beta)$ 之值。
